

SYMPTOCARE

AI- POWERED HEALTH SYMPTON CHECKER

Smart, accessible, and instant preliminary health insights.

THE PROBLEM

Online searches cause confusion & anxiety.

OUR SOLUTION

A centralized platform for symptom analysis built with streamlit

TARGET AUDIENCE

Everyday users seeking triage
Privacy-first, zero- auth

Context- Aware
In patient age, sex and symptom duration

Non- Medical Public
For individuals needing simple,clear health explanations

Safe & Guided Triage
Helps users decide if they need to consult a doctor

TECH STACK

Frontend:
Streamlit

Backend:
Python & Scikit-Learn

Model:
Random Forest

Dataset:
Kaggle Disease Prediction

KEY FEATURES

Instant AI analysis

Evaluates selected symptoms in real-time to output condition predictions and probability percentages

Input validation (min 3 symptoms)

Halts execution if no symptoms are selected and recommends three or more inputs for optimal prediction precision

41 condition classes

Classifies user inputs against 41 distinct medical condition categories using the trained Random Forest model

Zero-authentication

Allows immediate browser access without mandatory registration or saving personal health identifiers

PERFORMANCE

Accuracy

Achieved a high overall proportion of correct condition predictions across the evaluation samples

Precision

Indicates a low rate of false positives, ensuring the suggested conditions accurately align with the input symptoms

Recall

Reflects high class sensitivity, which reduces false negatives across the candidate health conditions

UI VISUALIZATION

Multi-select symptom selection

Select symptoms

Interactive symptom selection that has a clear probability scores

Primary assessment

Primary probability

DISCLAIMER

Educational tool only. It does not replace professional medical diagnosis
